# Research and Development Plan

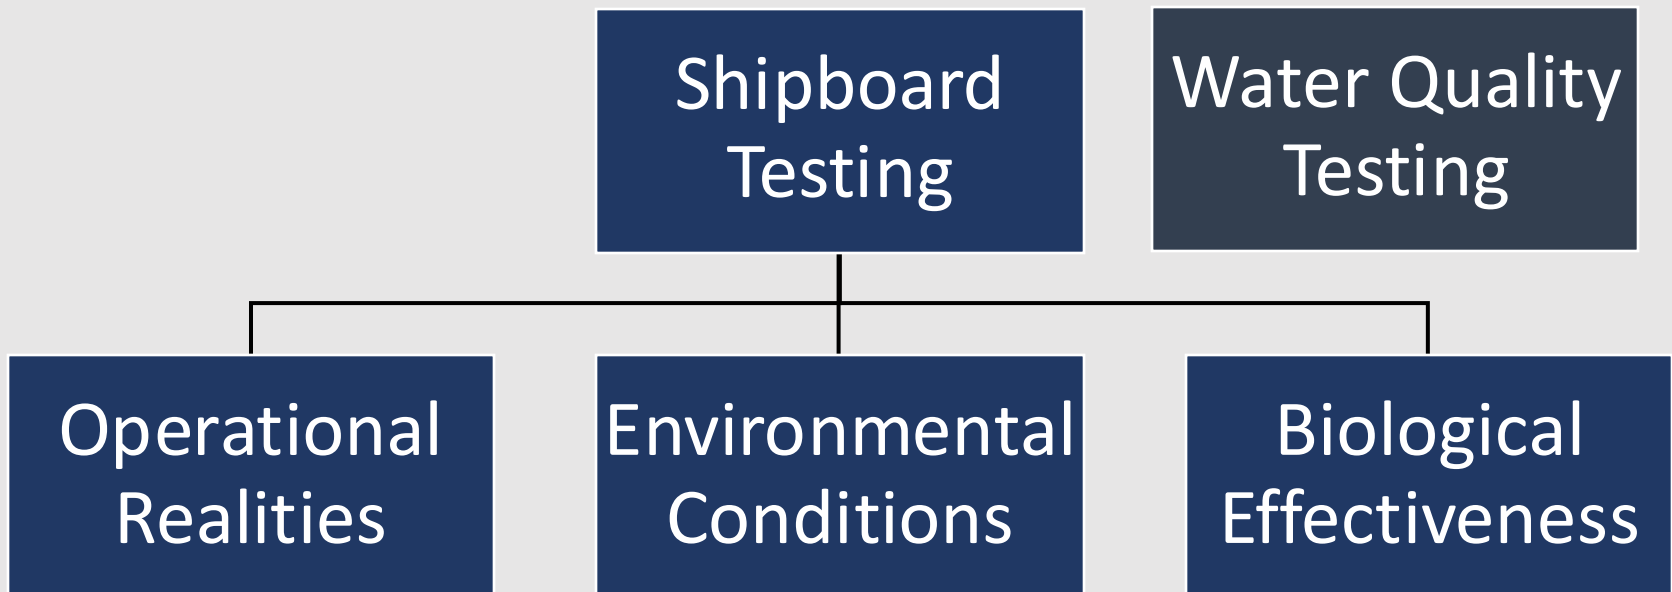

**Purpose:** Determine whether existing USCG type-approved BWMS can treat Great Lakes ballast water effectively to meet current discharge standard, either using existing methods or adapted methods adjusted to reflect the different environmental conditions of the Great Lakes and operational realities of Laker vessels.

# Outcome of Stakeholder Comments R&D plan v. 5 to v. 6

Research Area	Project Description
<b>RA1: Identification of Methods/Alternatives and Assessment of Cost for Great Lakes Ballast Water Management</b>	
1-1	Determining Operational Characteristics of Great Lakes Vessels
1-2	Land-Based BWMS Evaluation
<b>1-3</b>	<b>Shipboard BWMS Evaluation</b>
1-4	Ballast Water Filter Performance
1-5	Feasibility Study of Reception Facility Treatment
<b>RA2: Toward Development of Great Lakes Relevant BWMS Testing Protocol</b>	
<b>2-1</b>	<b>Characterize BWMS Challenge Conditions</b>
2-2	Protocol Freshwater Revision and Validation
<b>RA3: Assessing the Risk of Aquatic Nuisance Species Transfer from Ballast Water Discharge</b>	
3-1	Quantifying ANS Transfer
3-2	Determining Impact of ANS Reduction

**R&D Plan v. 6 Purpose:** Determine whether existing USCG type-approved BWMS can treat Great Lakes ballast water effectively to meet current discharge standard, either using existing methods or adapted methods adjusted to reflect the different environmental conditions of the Great Lakes and operational realities of Laker vessels.

# Shipboard Operational Realities and Environmental Conditions

459 Crew log entries in 2023

Ship:				Did the BWMS Keep Pace with Cargo Operations?				Reason(s) for Stopping or not Using Treatment*					UV-T Measurement			
Location City, Port, Dock	Location (circle one)	Process (circle one)	Date and Time of Ballasting	Kept Pace With Cargo	Slowed Ballasting, But Not Bypassed BWMS Start/Stop	Bypassed Due To Treatment Was Not Attempted*	Total Ballasted Volume Treated And Non-treated (m3)	List Of Ballast Tanks Treated	Was The BWMS Restarted? (if yes, circle all that apply)*	Routine BWMS Maintenance	BWMS Mechanical Issue	Ship Mechanical Issue	Cargo Requirements	Other (Add Notes)	Calibrated With Bottled Water (17%)	UV-T Near Start of Pumping (%T)
Stoneport	In Port / Other**	Ballast / Deballast	Start: 7-25 1225 End: 1426				Treated: 2665 Non-treated: 2	4P, 3P	Cargo Rate / BWMS Issue / Other							61.8

## BWMS Operation Report

IMO No.: 1304610

Vessel Name: Michigan Trader

System Operation mode: De-Ballast

USCG Compliance

System Started: 11/1/2022 2:24:00 AM At GPS Position: N/A , N/A

System Stopped: 11/1/2022 3:58:22 AM At GPS Position: N/A , N/A

Operation ended: Treatment successful

Total treated volume: 1573 m<sup>3</sup>

Total Lamp power consumption: 340.2 kWh

### Process Data

Process Data	Average	Maximum	Minimum
Lamp Current for this operation	Average Current 200.7 A	Maximum Current 201.5 A	Minimum Current 200.1 A
Lamp Power for this operation	Average Power 216.2 kW	Maximum Power 217.0 kW	Minimum Power 215.7 kW
Flowrate for this operation	Average Flowrate 1000 m <sup>3</sup> /h	Maximum Flowrate 1097 m <sup>3</sup> /h	Minimum Flowrate 1 m <sup>3</sup> /h
Inlet Pressure for this operation	Average Pressure 0.4 bar	Maximum Pressure 1.1 bar	Minimum Pressure 0.3 bar
Outlet Pressure for this operation	Average Pressure 0.4 bar	Maximum Pressure 1.0 bar	Minimum Pressure 0.3 bar
Diff. Pressure for this operation	Average Pressure 0.030 bar	Maximum Pressure 0.040 bar	Minimum Pressure 0.000 bar
UVI for this operation	Average UVI 541 W/m <sup>2</sup>	Maximum UVI 676 W/m <sup>2</sup>	Minimum UVI 323 W/m <sup>2</sup>
UV-unit Temperature for this operation	Average Temp. +12.4 °C	Maximum Temp. +23.3 °C	Minimum Temp. +12.0 °C

# Shipboard Operational Realities and Environmental Conditions

## DESMI Compact Clean System Performance

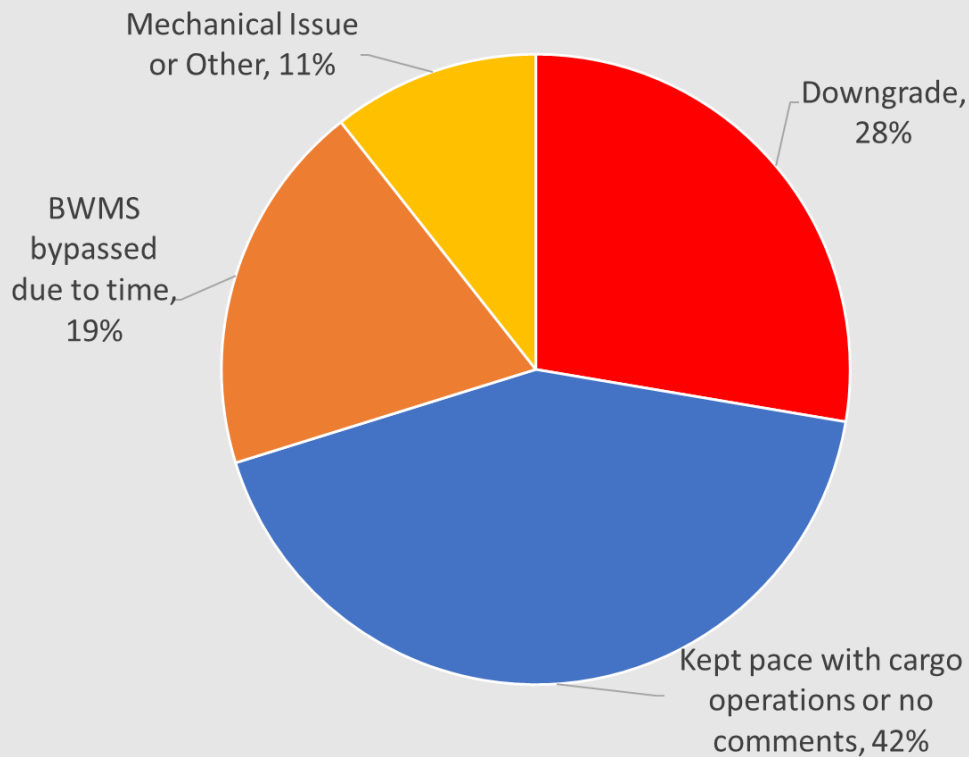

- Crew Logs from 2023 Shipping Season (n=52)
- Only ballast events that lasted >10 minutes

# Shipboard Operational Realities and Environmental Conditions

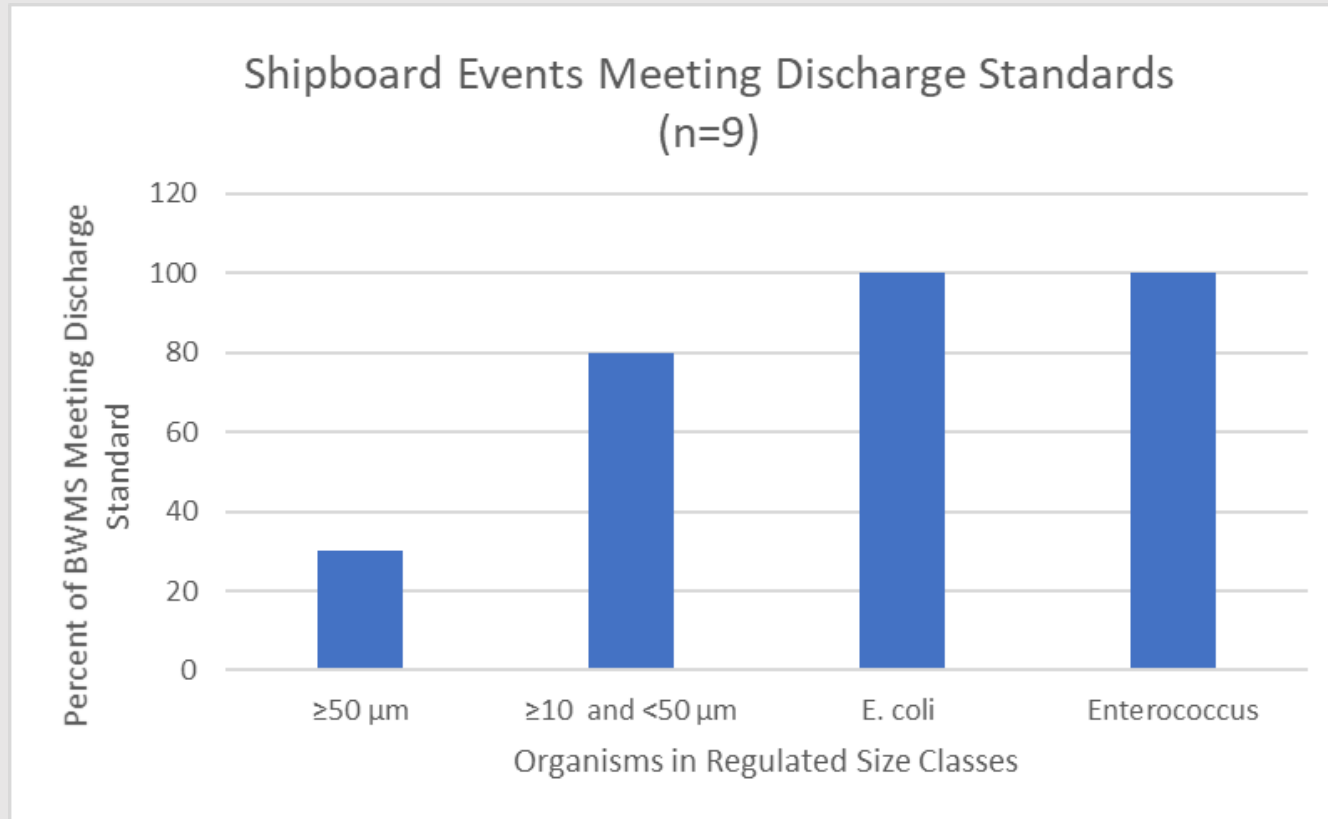

## BIO-SEA B System Performance

- Crew Logs from 2023 Shipping Season (n=94)
- Only ballast events that lasted >10 minutes

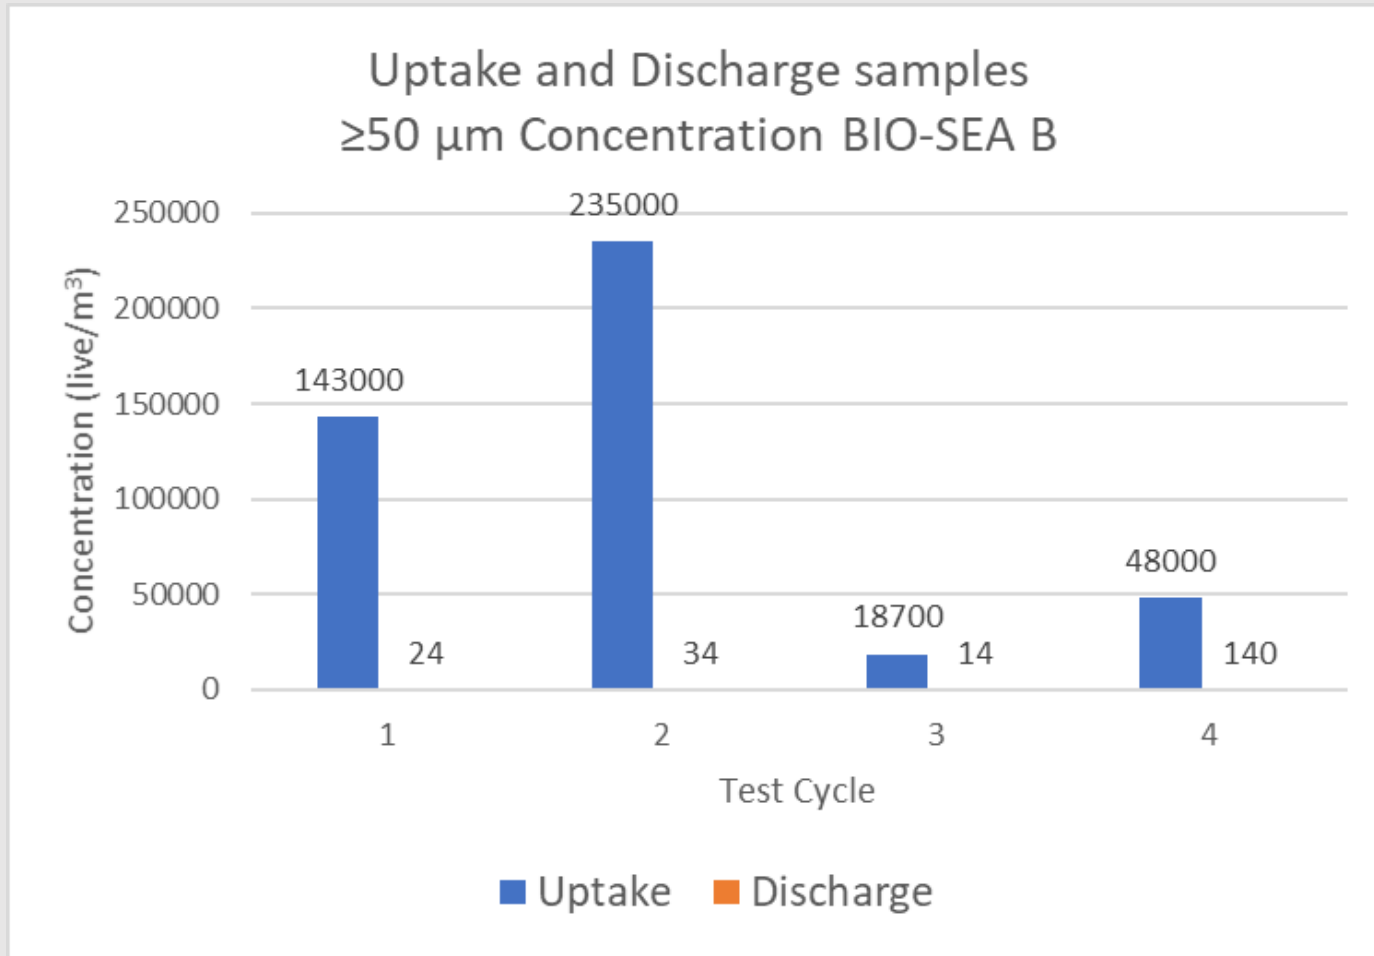

# R&D Plan Shipboard Biological Effectiveness for Paired Uptake and Discharge Events 2022-2023

**UV Treatment** – DESMI Compact Clean, Bio-UV BIO-SEA B, AlfaLaval Pure Ballast  
**Chlorination** – TeamTec Senza

# Biological Effectiveness of BIO-SEA B BWMS on $\geq 50 \mu\text{m}$ size class

# Assessment of BWMS Compliance to D-2 Discharge Standard (n=228)

R&D Plan Shipboard  
Biological Effectiveness  
Average = 30%

Percentage of compliant in-tank and in-line samples during compliance testing by year (D-2 standard,  $\geq 50 \mu\text{m}$  -sized organisms). Number of samples each year is provided in brackets.

# R&D plan 2023-2024 Reports

- Great Lakes Ballast Water Research and Development Plan v. 6
- Evaluating a Most Probable Number Method for Assessing the Viability of Great Lakes Protists
- Shore-based Evaluation of the Effectiveness of the Bawat Ballast Water Management System Mk2 Mobile Treatment Unit
- Toward Development of a Great Lakes Relevant BWMS Testing Protocol: Use of Stains to Assess Viability of Resting Stages
- Toward Development of a Great Lakes Relevant BWMS Testing Protocol: Assessment of Environmental Acceptability of Treated Ballast Water Upon Discharge
- Bench-scale Tests of the Newman Zone OS Ballast Water Deoxygenation Treatment
- Land-based Evaluation of the Effectiveness of the Optimarin DN100 and DN150 Ballast Systems in the Great Lakes
- Fanberg, L. et al., “Presence zooplankton, eggs, and resting stages in ballast water samples from the Laurentian Great Lakes.” Vol.50, Issue 1, February 2024. <https://doi.org/10.1016/j.jglr.2023.102275>
- Evaluating a most probable number method for assessing the viability of Laurentian Great Lakes protists – under review JGLR
- Mesocosm manuscript – under internal review

# What's next in 2024?

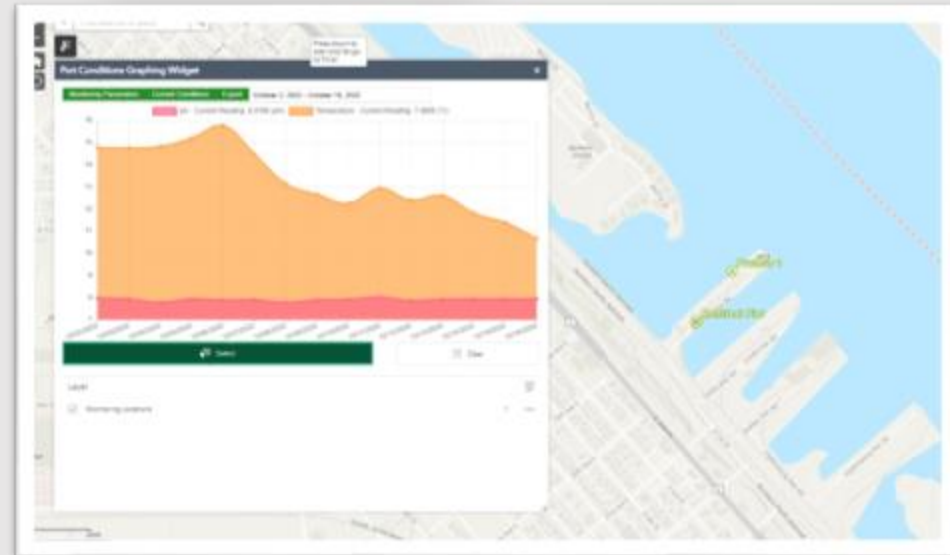

## Complete Ballast Water Filter Performance

### 15 ship visits

- VTB Michigan Trader –UV
- Interlake Pere Marquette – UV
- Interlake Pathfinder – 40 and 50  $\mu\text{m}$  filters
- Algoma Mariner - chlorination
- Algoma Algoluna - UV

## Port water quality condition sampling to address challenge condition question

- 25 ports with highest uptake volumes
- Continue to develop interactive database

# What's next? (continued)

2025 – all pending  
receipt of GLRI funds

Addition of M/V Mark W. Barker  
to current ship sampling roster

Continuation of Shipboard and  
Port Water Quality testing

Photo courtesy of Interlake-Steamship
